Initial cancellation release: new 4 versus existing 4 (separate rows, shared column scales)
Circles: stored trajectories; dashed left: actual jet; dashed right: ideal initial coefficient
Saved samples and actual second-order jet
Measured local residual; no error bound
Ideal quadratic coefficient; zero excluded
New off-grid 4
Signed S (10⁻⁶)
Existing opposing 4
Signed S (10⁻⁶)
$P_{m,0} = -1.75 \times 10^{-4}$
$P_{m,0} = -0.75 \times 10^{-4}$
$P_{m,0} = +0.75 \times 10^{-4}$
$P_{m,0} = +1.75 \times 10^{-4}$
$P_{m,0} = -2 \times 10^{-4}$
$P_{m,0} = -1 \times 10^{-4}$
$P_{m,0} = +1 \times 10^{-4}$
$P_{m,0} = +2 \times 10^{-4}$
$S_{\text{saved}} - S_{\text{jet}}$ (10^{-9})
S_{saved}/η^2 (10^{-5})
$\eta = \ln(a/a_0)$
